PROFESSIONAL SUMMARY

I'm a final-year Energy Systems Engineering student at Yaşar University and I plan to graduate in February 2027. I'm looking for a long-term internship or a part-time position in the energy sector. In my capstone project I built ANN and LSTM models to forecast wind and solar energy. I have also modeled a microgrid in MATLAB/Simulink and designed a rooftop PV system in PV*SOL. During my internship at Petkim I studied gas turbines and HRSG systems up close. My background in drama and sales has also made me comfortable communicating and working in a team.

EDUCATION

Yaşar University, İzmir 2021 – Expected February 2027
B.Sc. in Energy Systems Engineering
Currently in final semester.

ACADEMIC PROJECTS

Capstone Project: Hybrid Renewable Energy Prediction Model Using ANN and LSTM MATLAB
• Developed a hybrid renewable energy prediction model combining Artificial Neural Network (ANN) and Long Short-Term Memory (LSTM) approaches.
• Applied the model first to wind energy, then to combined wind and solar energy, and compared the results.
• Tested different dataset-length scenarios within each model to evaluate their effect on prediction performance.
• Co-author of the project's oral presentation, delivered with my academic advisor at the International Conference on Nuclear and Renewable Energy Resources (NURER 2026), Almaty, Kazakhstan.

Microgrid Modeling (Renewable Energy Systems Integration course) MATLAB/Simulink
Rooftop PV System Design (Solar Energy course) PV*SOL
Heat Pump Design (Heat Pumps course) Course Project

WORK EXPERIENCE

Engineering Intern | SOCAR Türkiye – Petkim, Aliağa, İzmir Aug 2025 – Sep 2025
• Worked in the Energy Management Directorate and studied Petkim's cogeneration system, including the gas turbine, heat recovery unit, feedwater system and steam boilers.
• Analyzed gas turbine operating data in Excel to examine the effect of ambient temperature on electricity output.
• Carried out an HRSG project evaluating steam generation from gas turbine exhaust heat, including energy balance, efficiency and CO2 emission calculations.

Sales Consultant | Adnan Menderes Airport ATÜ Duty Free Jul 2024 – Aug 2024
• Provided customer service and sales consulting in a fast-paced corporate environment.
• Communicated in English with international customers, strengthening problem-solving and teamwork skills.

Drama Instructor | Melisa Karan Art Center 2022
• Led drama classes using theater techniques to develop group dynamics, diction, body language and stage awareness.

Creative Drama Instructor | Prömiyer Kindergarten 2021 – 2022
• Designed interactive games and role plays to support children's social and emotional development.

SKILLS

Software: MATLAB, Simulink, PV*SOL, Microsoft Excel
Technical Areas: Renewable energy forecasting, ANN/LSTM modeling, microgrids, photovoltaic systems, heat pumps, gas turbines, HRSG, thermodynamic analysis
Languages: Turkish (native), English (B1), German (A1)

CERTIFICATIONS

- Menalinks Certificate, Renewable Energy Systems Integration course – RENAC (Renewables Academy)
- Drama Instructor Certificate – approved by the Turkish Ministry of National Education
